

# Equipment Specification Sheet

High Pressure Sand Cleaner (Sandblasting Machine) • Model: NP-620

## Manufacturer & Identification

|                |                                                   |
|----------------|---------------------------------------------------|
| Manufacturer   | Xi'an Will Co., Ltd (WINCO)                       |
| Equipment Type | High Pressure Sand Cleaner / Sandblasting Machine |
| Model          | NP-620                                            |

## Technical Specifications & Capacities

|                                     |                                                                                     |
|-------------------------------------|-------------------------------------------------------------------------------------|
| Working Pressure                    | 0.6 - 0.8 MPa (approx. 6 - 8 bar / 87 - 116 psi)                                    |
| Tank Capacity                       | 200 Liters (Upgraded Heavy-Duty Scale)                                              |
| Recommended Air Compressor Capacity | 100 to 150+ CFM (ensuring continuous stable supply at 7–8 bar under operating load) |

**Operational Note:** As a larger 200L capacity configuration (NP-620), air compressor requirements scale up compared to 100L units to match continuous high-volume abrasive flow. Ensure the air supply maintains steady pressure within the 0.6–0.8 MPa working range.
